

Cleaved-Caspase-5 p20 (D121) rabbit pAb

Cat No.: ES1021

For research use only

Overview

Product Name Cleaved-Caspase-5 p20 (D121) rabbit pAb

Host species Rabbit
Applications WB;ELISA

Species Cross-Reactivity Human;Rat;Mouse;

Recommended dilutions Western Blot: 1/500 - 1/2000. ELISA: 1/20000. Not

yet tested in other applications.

Immunogen The antiserum was produced against synthesized

peptide derived from human Caspase 5. AA

range:102-151

Specificity Cleaved-Caspase-5 p20 (D121) Polyclonal Antibody

detects endogenous levels of fragment of activated Caspase-5 p20 protein resulting from cleavage

adjacent to D121.

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and

0.02% sodium azide.

Storage Store at -20°C. Avoid repeated freeze-thaw cycles.

Protein Name Caspase5
Gene Name CASP5

Cellular localization neuron projection, neuronal cell body, IPAF

inflammasome complex,NLRP1 inflammasome complex,NLRP3 inflammasome complex,AIM2

inflammasome complex,

Purification The antibody was affinity-purified from rabbit

antiserum by affinity-chromatography using

epitope-specific immunogen.

Clonality Polyclonal
Concentration 1 mg/ml
Observed band 22kD
Human Gene ID 838
Human Swiss-Prot Number P51878

+86-27-59760950

Alternative Names CASP5; ICH3; Caspase-5; CASP-5; ICE(rel)-III;

ELKbio@ELKbiotech.com

Protease ICH-3; Protease TY

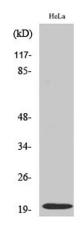

Background This gene encodes a member of the

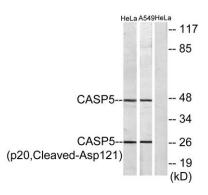

23-2, No.388 Gaoxin 2nd Road, Wuhan East Lake Hi-tech Development Zone, Hubei , P.R.

cysteine-aspartic acid protease (caspase) family. Sequential activation of caspases plays a central role in the execution-phase of cell apoptosis. Caspases exist as inactive proenzymes which undergo proteolytic processing at conserved aspartic residues to produce two subunits, large and small, that dimerize to form the active enzyme. Overexpression of the active form of this enzyme induces apoptosis in fibroblasts. Max, a central component of the Myc/Max/Mad transcription regulation network important for cell growth, differentiation, and apoptosis, is cleaved by this protein; this process requires Fas-mediated dephosphorylation of Max. The expression of this gene is regulated by interferon-gamma and lipopolysaccharide. Alternatively spliced transcript variants have been identified for this gene. [provided by RefSeq, Aug 2010],

Western Blot analysis of various cells using Cleaved-Caspase-5 p20 (D121) Polyclonal Antibody diluted at 1:1000

+86-27-59760950

Western blot analysis of lysates from HeLa and A549 cells, treated with etoposide 25uM 24h, using Caspase 5 (p20,Cleaved-Asp121) Antibody. The lane on the right is blocked with the synthesized peptide.
