

LST8 rabbit pAb

Cat No.:ES11340

For research use only

Overview

LST8 rabbit pAb
Rabbit
WB;ELISA
Human;Rat;Mouse
WB 1:500-2000 ELISA 1:5000-20000
Synthesized peptide derived from human protein .
at AA range: 100-180
LST8 Polyclonal Antibody detects endogenous levels
of protein.
Liquid in PBS containing 50% glycerol, 0.5% BSA and
0.02% sodium azide.
Store at -20°C. Avoid repeated freeze-thaw cycles.
Target of rapamycin complex subunit LST8 (TORC
subunit LST8) (G protein beta subunit-like) (Gable)
(Protein GbetaL) (Mammalian lethal with SEC13
protein 8) (mLST8)
MLST8 GBL LST8
Cytoplasm .
The antibody was affinity-purified from rabbit
antiserum by affinity-chromatography using
epitope-specific immunogen.
Polyclonal
1 mg/ml
35kD
64223
Q9BVC4
function:Unessential component of the TORC1
complex and essential component of the TORC2
complex. TORC1 controls cell growth in response to
environmental signals, and is inactivated by nutrient
limitation and environmental stress. Within TORC1,
LST8 interacts directly with FRAP1 and enhances its

kinase activity. In nutrient-poor conditions, stabilizes the FRAP1-RAPTOR interaction and favors RAPTOR-mediated inhibition of FRAP1 activity. TORC2 controls polarity of the actin cytoskeleton via the RAC1 pathway. TORC2 mediates phosphorylation of Akt/PKB on 'Ser-473' and phosphorylation of PKCalpha on 'Ser-657'., similarity: Belongs to the WD repeat LST8 family., similarity: Contains 7 WD repeats., subunit: Interacts with FRAP1, RAPTOR and RHEB. Part of the target of rapamycin complex 1 (TORC1) which contains LST8, FRAP1, RAPTOR and AKT1S1. TORC1 binds to and is inhibited by FKBP12-rapamycin. Part of the target of rapamycin complex 2 (TORC2) which contains FRAP1, LST8, PROTOR1, RICTOR and MAPKAP1. Contrary to TORC1, TORC2 does not bind to and is not sensitive to FKBP12-rapamycin.,tissue specificity:Broadly expressed, with highest levels in skeletal muscle, heart and kidney.,

Western blot analysis of lysates from SW480 cells, primary antibody was diluted at 1:1000, 4° over night
