

p53 (phospho Ser46) rabbit pAb

Cat No.: ES1385

For research use only

Overview

Specificity

Product Name p53 (phospho Ser46) rabbit pAb

Host species Rabbit
Applications WB;ELISA

Species Cross-Reactivity Human; Monkey

Recommended dilutions Western Blot: 1/500 - 1/2000. ELISA: 1/5000. Not

yet tested in other applications.

Immunogen The antiserum was produced against synthesized

peptide derived from human p53 around the phosphorylation site of Ser46. AA range:11-60 Phospho-p53 (S46) Polyclonal Antibody detects

endogenous levels of p53 protein only when

phosphorylated at S46.

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and

0.02% sodium azide.

Storage Store at -20°C. Avoid repeated freeze-thaw cycles.

Protein Name Cellular tumor antigen p53

Gene Name TP53

Cellular localization Cytoplasm . Nucleus . Nucleus, PML body .

Endoplasmic reticulum . Mitochondrion matrix . Cytoplasm, cytoskeleton, microtubule organizing center, centrosome . Recruited into PML bodies together with CHEK2 (PubMed:12810724).

Translocates to mitochondria upo

Purification The antibody was affinity-purified from rabbit

antiserum by affinity-chromatography using

epitope-specific immunogen.

Clonality Polyclonal
Concentration 1 mg/ml
Observed band 53kD
Human Gene ID 7157
Human Swiss-Prot Number P04637

Alternative Names TP53; P53; Cellular tumor antigen p53; Antigen

NY-CO-13; Phosphoprotein p53; Tumor suppressor

Background

p53

tumor protein p53(TP53) Homo sapiens This gene encodes a tumor suppressor protein containing transcriptional activation, DNA binding, and oligomerization domains. The encoded protein responds to diverse cellular stresses to regulate expression of target genes, thereby inducing cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. Mutations in this gene are associated with a variety of human cancers, including hereditary cancers such as Li-Fraumeni syndrome. Alternative splicing of this gene and the use of alternate promoters result in multiple transcript variants and isoforms. Additional isoforms have also been shown to result from the use of alternate translation initiation codons (PMIDs: 12032546, 20937277). [provided by RefSeq, Feb 2013],

Western Blot analysis of various cells using Phospho-p53 (S46) Polyclonal Antibody diluted at 1:1000

Western blot analysis of lysates from 293 cells treated with UV, using p53 (Phospho-Ser46) Antibody. The lane on the right is blocked with the phospho peptide.
