Background	This gene encodes a member of the plexin family.
	Plexins are transmembrane receptors for
	semaphorins, a large family of proteins that regulate
	axon guidance, cell motility and migration, and the
	immune response. The encoded protein and its
	ligand regulate melanocyte adhesion, and viral

semaphorins may modulate the immune response by binding to this receptor. The encoded protein may be a tumor suppressor protein for melanoma. Alternatively spliced transcript variants have been observed for this gene. [provided by RefSeq, Jan 2011],
