

IRP-1 (phospho Ser711) rabbit pAb

Cat No.:ES6388

For research use only

Overview

Product Name	IRP-1 (phospho Ser711) rabbit pAb	
Host species	Rabbit	
Applications	WB;IHC;IF;ELISA	
Species Cross-Reactivity	Human;Mouse;Rat;Monkey	
Recommended dilutions	Western Blot: 1/500 - 1/2000.	
	Immunohistochemistry: 1/100 - 1/300. ELISA:	
	1/10000. Not yet tested in other applications.	
Immunogen	The antiserum was produced against synthesized	
	peptide derived from human IREB1 around the	
	phosphorylation site of Ser711. AA range:681-730	
Specificity	Phospho-IRP-1 (S711) Polyclonal Antibody detects	
	endogenous levels of IRP-1 protein only when	
	phosphorylated at S711.	
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and	
	0.02% sodium azide.	
Storage	Store at -20°C. Avoid repeated freeze-thaw cycles.	
Protein Name	Cytoplasmic aconitate hydratase	
Gene Name	ACO1	
Cellular localization	Cytoplasm, cytosol.	
Purification	The antibody was affinity-purified from rabbit	
	antiserum by affinity-chromatography using	
	epitope-specific immunogen.	
Clonality	Polyclonal	
Concentration	1 mg/ml	
Observed band	85kD	
Human Gene ID	48	
Human Swiss-Prot Number	P21399	
Alternative Names	ACO1; IREB1; Cytoplasmic aconitate hydratase;	
	Aconitase; Citrate hydro-lyase; Ferritin repressor	
	protein; Iron regulatory protein 1; IRP1;	, IIII
	Iron-responsive element-binding protein 1; IRE-BP 1	
Background	The protein encoded by this gene is a bifunctional,	
	cytosolic protein that functions as an essential

enzyme in the TCA cycle and interacts with mRNA to control the levels of iron inside cells. When cellular iron levels are high, this protein binds to a 4Fe-4S cluster and functions as an aconitase. Aconitases are iron-sulfur proteins that function to catalyze the conversion of citrate to isocitrate. When cellular iron levels are low, the protein binds to iron-responsive elements (IREs), which are stem-loop structures found in the 5' UTR of ferritin mRNA, and in the 3' UTR of transferrin receptor mRNA. When the protein binds to IRE, it results in repression of translation of ferritin mRNA, and inhibition of degradation of the otherwise rapidly degraded transferrin receptor mRNA. The encoded protein has been identified as a moonlighting protein based on its ability to perform mechanistically distinct
