

## p53 (phospho Thr81) rabbit pAb

## Cat No.:ES7426

For research use only

## Overview

Product Name	p53 (phospho Thr81) rabbit pAb	
Host species	Rabbit	
Applications	IHC;IF;ELISA	
Species Cross-Reactivity	Human;Rat;Mouse;	
Recommended dilutions	WB 1:500-2000 ,Immunohistochemistry: 1/100 -	
	1/300. ELISA: 1/20000. Not yet tested in other	
	applications.	
Immunogen	The antiserum was produced against synthesized	
0	peptide derived from human p53 around the	
	phosphorylation site of Thr81. AA range:51-100	
Specificity	Phospho-p53 (T81) Polyclonal Antibody detects	
	endogenous levels of p53 protein only when	
	phosphorylated at T81.	
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and	
	0.02% sodium azide.	
Storage	Store at -20°C. Avoid repeated freeze-thaw cycles.	
Protein Name	Cellular tumor antigen p53	
Gene Name	TP53	
Cellular localization	Cytoplasm . Nucleus . Nucleus, PML body .	
	Endoplasmic reticulum . Mitochondrion matrix .	
	Cytoplasm, cytoskeleton, microtubule organizing	
	center, centrosome . Recruited into PML bodies	
	together with CHEK2 (PubMed:12810724).	
	Translocates to mitochondria upo	
Purification	The antibody was affinity-purified from rabbit	
	antiserum by affinity-chromatography using	
	epitope-specific immunogen.	
Clonality	Polyclonal	
Concentration	1 mg/ml	
Observed band	-	
Human Gene ID	7157	
Human Swiss-Prot Number	P04637	
Alternative Names	TP53; P53; Cellular tumor antigen p53; Antigen	
		111

Background

NY-CO-13; Phosphoprotein p53; Tumor suppressor p53

tumor protein p53(TP53) Homo sapiens This gene encodes a tumor suppressor protein containing transcriptional activation, DNA binding, and oligomerization domains. The encoded protein responds to diverse cellular stresses to regulate expression of target genes, thereby inducing cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. Mutations in this gene are associated with a variety of human cancers, including hereditary cancers such as Li-Fraumeni syndrome. Alternative splicing of this gene and the use of alternate promoters result in multiple transcript variants and isoforms. Additional isoforms have also been shown to result from the use of alternate translation initiation codons (PMIDs: 12032546, 20937277). [provided by RefSeq, Feb 2013],

Enzyme-Linked Immunosorbent Assay (Phospho-ELISA) for Immunogen Phosphopeptide (Phospho-left) and Non-Phosphopeptide (Phospho-right), using p53 (Phospho-Thr81) Antibody

Immunohistochemistry analysis of paraffin-embedded human brain, using p53 (Phospho-Thr81) Antibody. The picture on the right is blocked with the phospho peptide.
