

PLSL rabbit pAb

Cat No.: ES8948

For research use only

Overview

Product Name PLSL rabbit pAb

Host species Rabbit
Applications WB;ELISA
Species Cross-Reactivity Human;Mouse

Recommended dilutions WB 1:500-2000 ELISA 1:5000-20000

Immunogen Synthesized peptide derived from human protein .

at AA range: 1-80

Specificity PLSL Polyclonal Antibody detects endogenous levels

of protein.

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and

0.02% sodium azide.

Storage Store at -20°C. Avoid repeated freeze-thaw cycles.

Protein Name Plastin-2 (L-plastin) (LC64P) (Lymphocyte cytosolic

protein 1) (LCP-1)

Gene Name LCP1 PLS2

Cellular localization Cytoplasm, cytoskeleton . Cell junction . Cell

projection . Cell projection, ruffle membrane; Peripheral membrane protein; Cytoplasmic side. Relocalizes to the immunological synapse between

peripheral blood T-lymphocytes and

antibody-presenting cells i

Purification The antibody was affinity-purified from rabbit

antiserum by affinity-chromatography using

epitope-specific immunogen.

Clonality Polyclonal
Concentration 1 mg/ml
Observed band 68kD
Human Gene ID 3936
Human Swiss-Prot Number P13796

Alternative Names

Background Plastins are a family of actin-binding proteins that

are conserved throughout eukaryote evolution and expressed in most tissues of higher eukaryotes. In

humans, two ubiquitous plastin isoforms (L and T) have been identified. Plastin 1 (otherwise known as Fimbrin) is a third distinct plastin isoform which is specifically expressed at high levels in the small intestine. The L isoform is expressed only in hemopoietic cell lineages, while the T isoform has been found in all other normal cells of solid tissues that have replicative potential (fibroblasts, endothelial cells, epithelial cells, melanocytes, etc.). However, L-plastin has been found in many types of malignant human cells of non-hemopoietic origin suggesting that its expression is induced accompanying tumorigenesis in solid tissues.
