Background	This gene encodes a member of the von Willebrand
	factor A domain containing protein family. This
	family of proteins is thought to be involved in the
	formation of filamentous networks in the
	extracellular matrices of various tissues. This protein
	contains five von Willebrand factor A domains. The
	specific function of this gene has not yet been
	determined. Two transcript variants encoding
	different isoforms have been found for this gene.
