

# FA9 (light chain, Cleaved-Arg191) rabbit pAb

Cat No.:ES19966

For research use only

## Overview

<b>Product Name</b>	FA9 (light chain, Cleaved-Arg191) rabbit pAb
<b>Host species</b>	Rabbit
<b>Applications</b>	WB; ELISA
<b>Species Cross-Reactivity</b>	Human;Mouse;Rat
<b>Recommended dilutions</b>	WB 1:1000-2000 ELISA 1:5000-20000
<b>Immunogen</b>	Synthesized peptide derived from human FA9 (light chain, Cleaved-Arg191)
<b>Specificity</b>	This antibody detects endogenous levels of Human,Mouse,Rat FA9 (light chain, Cleaved-Arg191, protein was cleaved amino acid sequence between 191-200 )
<b>Formulation</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Storage</b>	Store at -20°C . Avoid repeated freeze-thaw cycles.
<b>Protein Name</b>	FA9 (light chain, Cleaved-Arg191)
<b>Gene Name</b>	F9
<b>Cellular localization</b>	Secreted .
<b>Purification</b>	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
<b>Clonality</b>	Polyclonal
<b>Concentration</b>	1 mg/ml
<b>Observed band</b>	16 45kD
<b>Human Gene ID</b>	2158
<b>Human Swiss-Prot Number</b>	P00740
<b>Alternative Names</b>	Coagulation factor IX (EC 3.4.21.22;Christmas factor;Plasma thromboplastin component;PTC) [Cleaved into: Coagulation factor IXa light chain; Coagulation factor IXa heavy chain]
<b>Background</b>	This gene encodes vitamin K-dependent coagulation factor IX that circulates in the blood as an inactive zymogen. This factor is converted to an active form by factor XIa, which excises the activation peptide

**ELK Biotechnology**

and thus generates a heavy chain and a light chain held together by one or more disulfide bonds. The role of this activated factor IX in the blood coagulation cascade is to activate factor X to its active form through interactions with Ca<sup>2+</sup> ions, membrane phospholipids, and factor VIII. Alterations of this gene, including point mutations, insertions and deletions, cause factor IX deficiency, which is a recessive X-linked disorder, also called hemophilia B or Christmas disease. Alternative splicing results in multiple transcript variants encoding different isoforms that may undergo similar proteolytic processing. [provided by RefSeq, Sep 2015],
